

GOLF CART CANOPY LED LIGHT SWITCH WIRING

If you want the ability to turn off the Golf Cart canopy LED lights while keeping the under-glow lights on, you can add a simple on/off switch between the GROUND WIRE coming from the LED CONTROLLER to the Canopy LED lights. Whether you have RGB, RGBA, RGBW or even Single Color LEDs breaking that ground wire will work. We offer a simple push-button on/off that works well however any 12vdc rated switch will work. Just make sure you aren't exceeding the switch's amperage rating. See wiring diagram below.
