# Super Bright LED Tropical Palm Tree with Holographic Palm Fronds

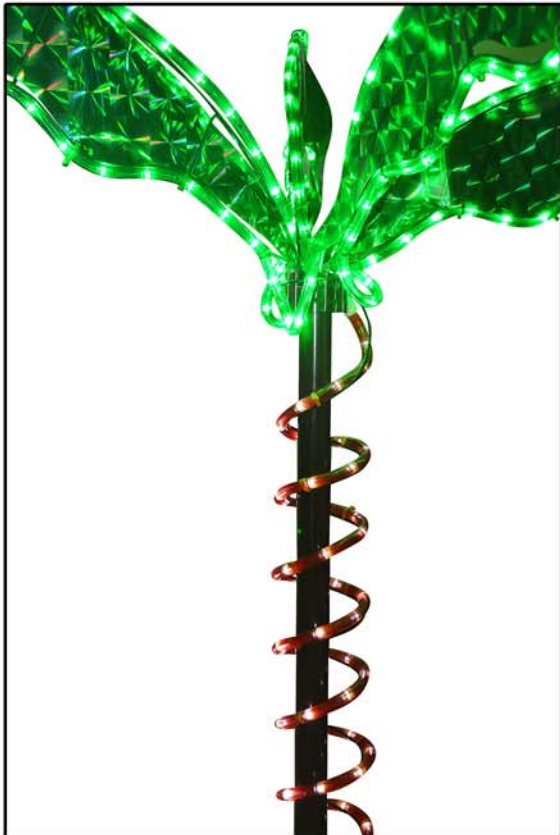

Tree Base Lock

Retaining Clips

Extra Zip Ties

The tree construction consists of a base stand, a bottom trunk pole, a top trunk pole, a spiral strand of LEDs that fit around the trunk and four lighted LED palm fronds.

-Unfold the tree stand and insert the bottom trunk pole into the stand. Tighten the tree base lock to secure the bottom trunk pole to the base. Note: The top trunk pole will have a carousel for inserting the fronds.
- Stretch the spiral strand of trunk LED lights out in advance. They are reinforced with a heavy gauge wire. Then, slide the spiral stand of lights down the trunk pole.
-Attach the 4 fronds to the top trunk pole and slide it through the spiral lights. Insert the top trunk pole into the bottom trunk pole.
-Use the retaining clips, attach the spiral strand of LED lights to the bottom ring at the base and the top ring to secure the lights to the trunk. Use 2 clips on top, 2 on bottom.
-Connect the trunk lights to the palm frond lights where they meet at the top. IMPORTANT: There is a small notch on each end of the plastic electrical connectors. Be sure they line up. If not, the palm frond lights will not light up.   Plug in to a 110/120vac outlet.

Tree top showing retaining clips, light connector and frond mount carousel.

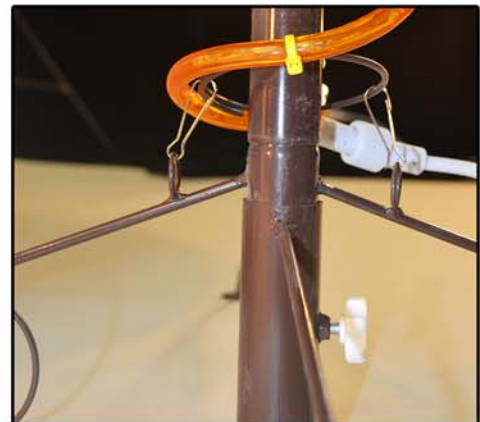

*Remember to pre stretch the spiral lights to the proper length, then slide them onto the pole.

(While the included sturdy metal stand supports the tree, you'll want to secure the tree and stand in bad weather or heavy winds.)
